Botulinium Toxin Course Content/Topics:

The Introduction to Botulinium Toxin course is the first choice for many medical professionals starting out in aesthetic medicine. Botulinum toxins are a very effective treatment for the lines and wrinkles caused by muscle activity (dynamic wrinkles). The foundation Botulinium Toxin course will teach candidates how to assess the face and inject the three most requested treatments in aesthetic medicine.

- Anatomy of the upper face
- Overview of facial musculature
- Aging of the skin
- Rejuvenation of the Aging Face
- Review Botulinium Toxin Products
- Pain management protocols
- Injection Techniques for Botulinum Toxins
- Botulinium Toxin Pre-Treatment Protocols
- Practical Botulinium Toxin Injection Training

Providing Botulinium Toxin cosmetic treatment is one of many skills a clinician will need to create optimum treatment results for today's cosmetic patient. Our courses are designed to teach you the best techniques facilitated by skilled trainers. Candidates are engaged in intensive practical training to learn how to assess faces based on age, anatomy, ethnicity, gender, maturity and lifestyle. The technical session is complimented with a business lecture that shows new candidates how to get started and regain his/her investment.

The candidates will spend the afternoon of the course injecting patients. We believe the only true way to learn is to have the extensive hands on practical experience for each course.
